

Post-operative Instructions For Wound Care

If incisions are covered with a tape dressing, leave it in place until instructed by Physician.

When the incision is exposed, clean gently with Hydrogen Peroxide soaked Q-tips, 2-3 times daily, followed by application of Bacitracin or Polysporin Ointment. Incisions should never be allowed to dry out.

Be sure to call us immediately to report:

- Temperature over 101°.
- Sudden swelling or discoloration.
- Major bleeding.
- Discharge or other sign of infection.

If you have any further questions, you are urged to call the office. If it is after hours, call (859) 283-9100 to speak to the Physician on call.
